Mobile App Feature Overview: Quick Call

Gabor Jozsa - 2020-11-05 - in GeoPro Mobile App v3

Feature Overview: Quick Call

Quick Call enables a GeoPro Mobile App User to rapidly place a phone call to one of two predefined phone numbers. These Quick Call options would be predefined by the account Administrator who can set what number is dialed when a button is pressed, and how that button is labeled.

Organizations can use this feature to supplement their lone worker protocols, giving the Mobile App User immediate access to resources that may aid them in their duties like non-emergency escalation contacts, on-site security, after hours building support, or their supervisor.

Note: To use this feature the Mobile App User will need to have a mobile device with voice service (i.e. cellular voice); the Quick Call feature will not provide voice calling service to a device that does not already have this ability, instead it provides a means to access this ability quickly and in a predefined way.
