

Viewing Geofences from the Options tab [GPv3]

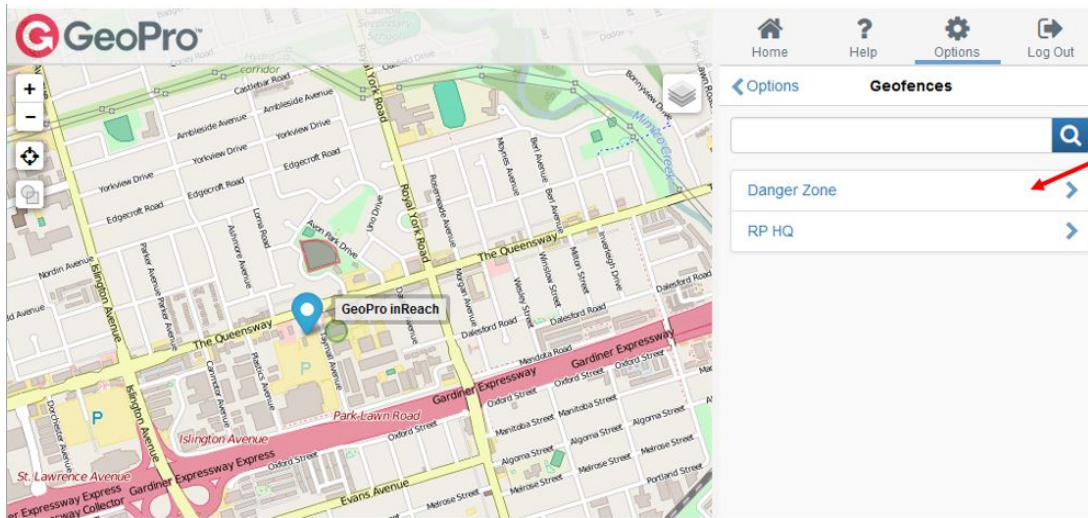

Lu Parente - 2015-11-12 - in How-To

As a User, you have the ability to view **Geofences** which have been created by an Administrator. Geofences allow Administrators to define and highlight geographical locations on the map which can be used to monitor and notify individuals when device users **enter** or **exit** specific areas. Geofences can be created using a **circle**, **polygon** or drawing a **line** on the map and a fence width can be defined as well as given a custom colour.

1. To view geofences created by your Administrator, navigate to the **Options** tab and select **Geofences**.

2. The Geofences page will be displayed. Select any of the geofences from the list to view the geofence location.

3. The Map will filter accordingly and the selected Geofence will be displayed.
